# THE GLASSHOUSE

ECO LIVING CONCEPTS BY GREEN SPACES

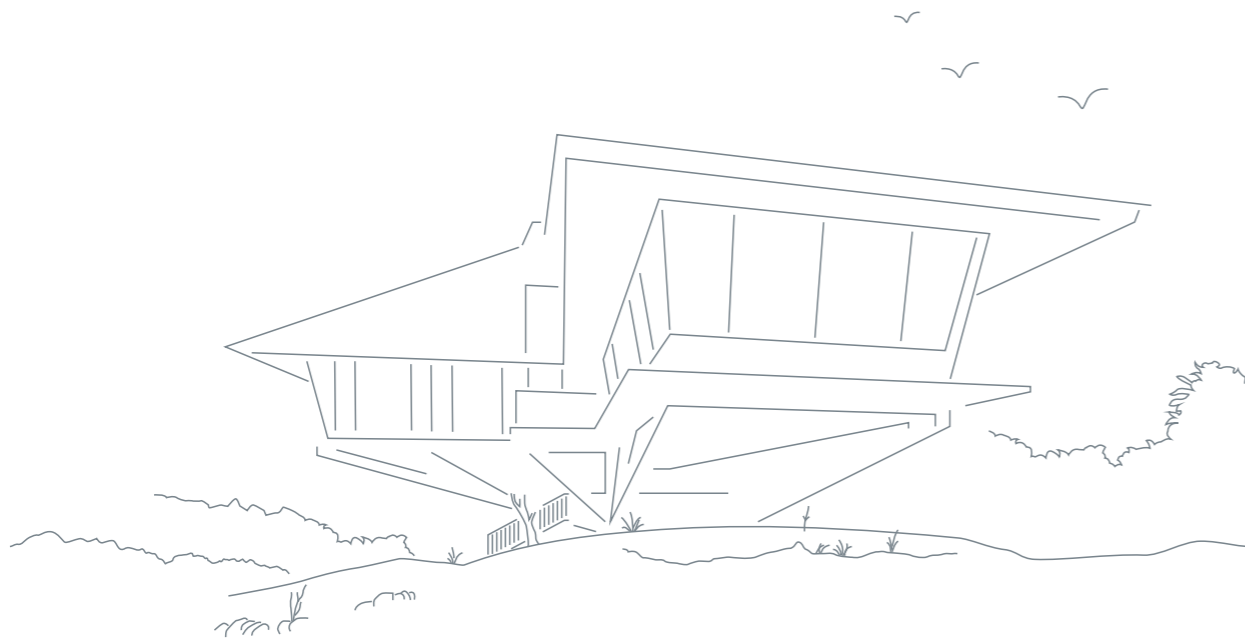

## **ECO LIVING CONCEPTS BY GREEN SPACES**

The Eco Living Concepts by Green Spaces is an endeavour to re-establish the authentic coexistence between man and nature by adopting and designing homes considering the topography and ecology of the land so that the natural contours are not disrupted. Under this concept, each home is uniquely handcrafted with least invasion and maximum use of natural light and resources. These healthy and ecologically responsible homes are a synthesis of pure lifestyle and luxury to rebuild the sync between nature and man.

## TOUCH THE EARTH SOFTLY

Glasshouse, the house with life-size glasses to give a stunning view is the classic example of coexistence with nature as the natural light and resources in it creates a luxurious and comfortable abode while keeping the ecological harmony intact. This sunny, natural light-filled home is for the pure living experience.

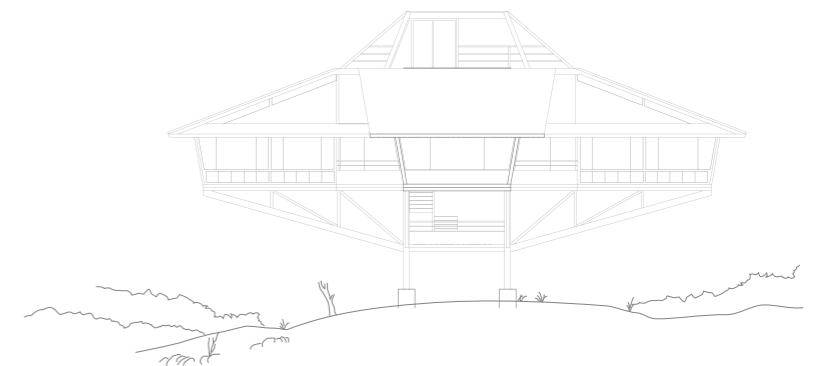

## ARCHITECTURE

The T-shaped glasshouse is a stable building with minimum weight on top of a mountain as it is constructed without using bricks. The material used for building this house has a minimum footprint as it is built by using steel, glass and prefab walls which effortlessly mingles with its ecological surrounding.

## INTERIOR

With a stunning exterior and a simple interior to balance it, the lighting fixtures, wall, flooring and furniture of the house are in adherence to the natural environment. The Glasshouse is a spacious home with balconies at both its ends to expose the dwellers to the sprawling greens, life-size glass windows in the living room for an undisturbed view, lavish bedroom and kitchen for the comfort and luxury.
